Galileo finds a lagoon: he does not publish his work but shares his knowledge with his students. The Pope is dying, and it seems totally possible that the next Pope could be the mathematical comparison of Galileo, Cardinal Barberini. Galileo is so hopeful that the cardinal would be in favor of his work that he takes up the publication of his research. He becomes very famous, which leads the inquisition to his door. They take him to the Vatican, where he is imprisoned. It turns out that, although Cardinal Barberini, who has now officially become the Pope, is in accordance with Galileo's ideas in Theory, he is too risky to support them. The inquisition threatens Galileo with torture, and eventually, delivery and renunciation of his work. His students are very disappointed by this and abandon the astrínomo. Almost a day after, Galileo is still imprisoned in his house, where he will remain until the end of his life. He is under constant surveillance and is forced to write documents that approve the opinion of the Church. However, when Andrea visits him, he reveals that he did renounce his work so that he could continue to chase him in secret. He has finished his work as Magnum, the speeches and mathematical demonstrations related to two new sciences. Galileo and Andrea take out the book from the PAãs and towards the Netherlands, where he is published without censorship. Now we explore some of the key issues of Galileo's life. The social responsibility of scientists science only has a commandment: contribution. And there had been more than any man percent (Andrea, scene 13). When he discovers that Galileo has continued his work, Andrea apologizes for speaking evil of him. He he lifts Galileo's spirit of Galileo with that he contributes to science more importantly that his weakness before the inquisition. The work explores the extent to which is responsible for the impact of his discoveries. He is so involved with finishing his work that he does not stop to consider what might mean to people in his life and how it can affect humanity as a whole. The work also discusses the sacrifices that a scientist has to make in his personal life to bring progress to society. Although, at the end of the work, Galileo manages to finish his work, he is imprisoned in his house and forced to do things against his will. Brecht made a small review in the second edition of the work that came out in 1947. After the consequences of the atomic bomb during World War II, the playwright raises the question of whether scientists are responsible for all the effects of their work on society, including the consequences that could not have been foreseen. Advance vs Tradition The goal of science is not to open the door to infinite wisdom, but to set a limit to infinite error (Galileo, Scene 9). Galileo teaches his students this lesson after explaining why ice floats in the water. The plot of the work revolves around the struggle of Galileo to bring progress to a country so rooted in the tradition that sees progress as its enemy. Although some of the Church's authorities, such as Cardinal Barberini and the scholar Clavius, understand that Galileo's findings are true and important, refuse to make them known to the world because it would disturb traditional beliefs. Tradition gives them power because it keeps the masses ignorant and therefore susceptible to the control of the Church. Scientific progress would lead people to question the traditional system, something that the Church could not allow Galileo to achieve. However, the game shows that the power of human progress is so strong that it cannot be stopped. Sooner or later, you will find a way out of the limitsTradition. Andrea Sartiandrea Sarti is Galileo's son ", Mrs. Sarti. At the beginning of the work, Andrea is a child taking Galileo under his wing. Later, Andrea becomes Galileo's assistant. He's disappointed in Galileo when the latter quits his job, and leaves him. At the end of the work, Andrea returns to Galileo and has the unique opportunity in life to carry out his legacy. Mrs. Sarti is also a companion of Galileo's daughter, Virginia. Ludovico Marsililudovico is a young man of a noble family. His mother has great hope for him and wants him to expand his scientific knowledge. That's why he hires Galileo as a tutor. Finally, he commits to Galileo's daughter, Virginia. However, Ludovico does not approve Galileo's teachings because they go against the established norms of the Church. Ludovico breaks the engagement with Virginia when she feels that her association with Galileo has become disadvantageous. Virginia is a young woman who is Galileo's daughter.
